PROJECTS

Fake Profile Detection on Social Networking Websites
Using Machine learning | Python

March 2024

- Fake profile detection using machine learning is to develop an automated system that can accurately identify and flag fake user profiles in social media. The system aims to use the machine learning algorithms to analyze use profiles data Behaviour to distinguish genuine profiles from fake ones.
- The goal is to provide online platforms and users with an effective and reliable tool to mitigate the risk of cyber-crime, cyberattacks and privacy violations by identifying and removing fake profiles promptly.

Holistic Approach Air Fare Prediction
using Machine Learning | Python

September 2023

- The purpose of implementing a holistic approach on airfare price prediction using machine learning technologies is to enhance the accuracy, reliability, and timeliness of airfare price prediction in the airline industry.
- Improve prediction accuracy: by leveraging machine learning technologies, we aim to develop predictive models that accurately capture the complex relationships and dynamics inherent in airfare pricing.
